

STRIP & SEALING BRUSHES

Strip brushes are mainly composed of three parts: brush wire, holder and fixings. Brush wire is the core part of industrial strip brushes, and the materials are diverse, including plastic, nylon, Animal hair, steel wire, brass, etc. This structural design makes the industrial strip brush have high wear resistance, corrosion resistance and adaptability.

Strip brush seals are commonly used for exterior doors to improve energy efficiency, prevent unwanted elements from entering the room. Also used on interior doors to reduce noise transfer between rooms and maintain privacy.

Industrial strip brush are used for cleaning the equipment in the likes of concrete mixers and pump trucks for their proper functioning, also to clean chemical reactors and storage tanks against material scaling and clogging, cleaning spinning machines, looms, and other equipment to enhance efficiency in production.

These brushes are used for cleaning trains, subways, buses, and other vehicles to achieve cleanliness, cleaning production line equipment, cleaning conveyor belts and food processing equipment to ensure that the food is safe for consumption.
